1.2	Indices and tables	1

Linux Container Creation for Gentoo

`glc` is a simple `lxc` creator program built on top of `lxc(1)` and `invoke` tasks.

The philosophy is to:

- delegate as much as possible to `lxc(1)`
- very configurable in `yaml`
- wraps individual operations with `invoke` tasks
- integrates with `oam`
- installable via `emerge/layman`

See *Changelog* for changes in this version.

1.1 Changelog

1.1.1 0.1.0

- [feature] creating... etc

1.2 Indices and tables

- `genindex`
- `modindex`
- `search`
